

PROJECT
AFFINITY

User Manual

PROJECT AFFINITY

“The Project Affinity is platform where users get interacted with the merchants in accessing of their products directly through our project web application. Where the users can buy or pick them up in their way to home at stores without wasting in long queues and wasting time. Even the merchants are benefitted by it as this web application required features to them.”

PROJECT
AFFINITY

Introducing Our Website

- This Home page of our web application

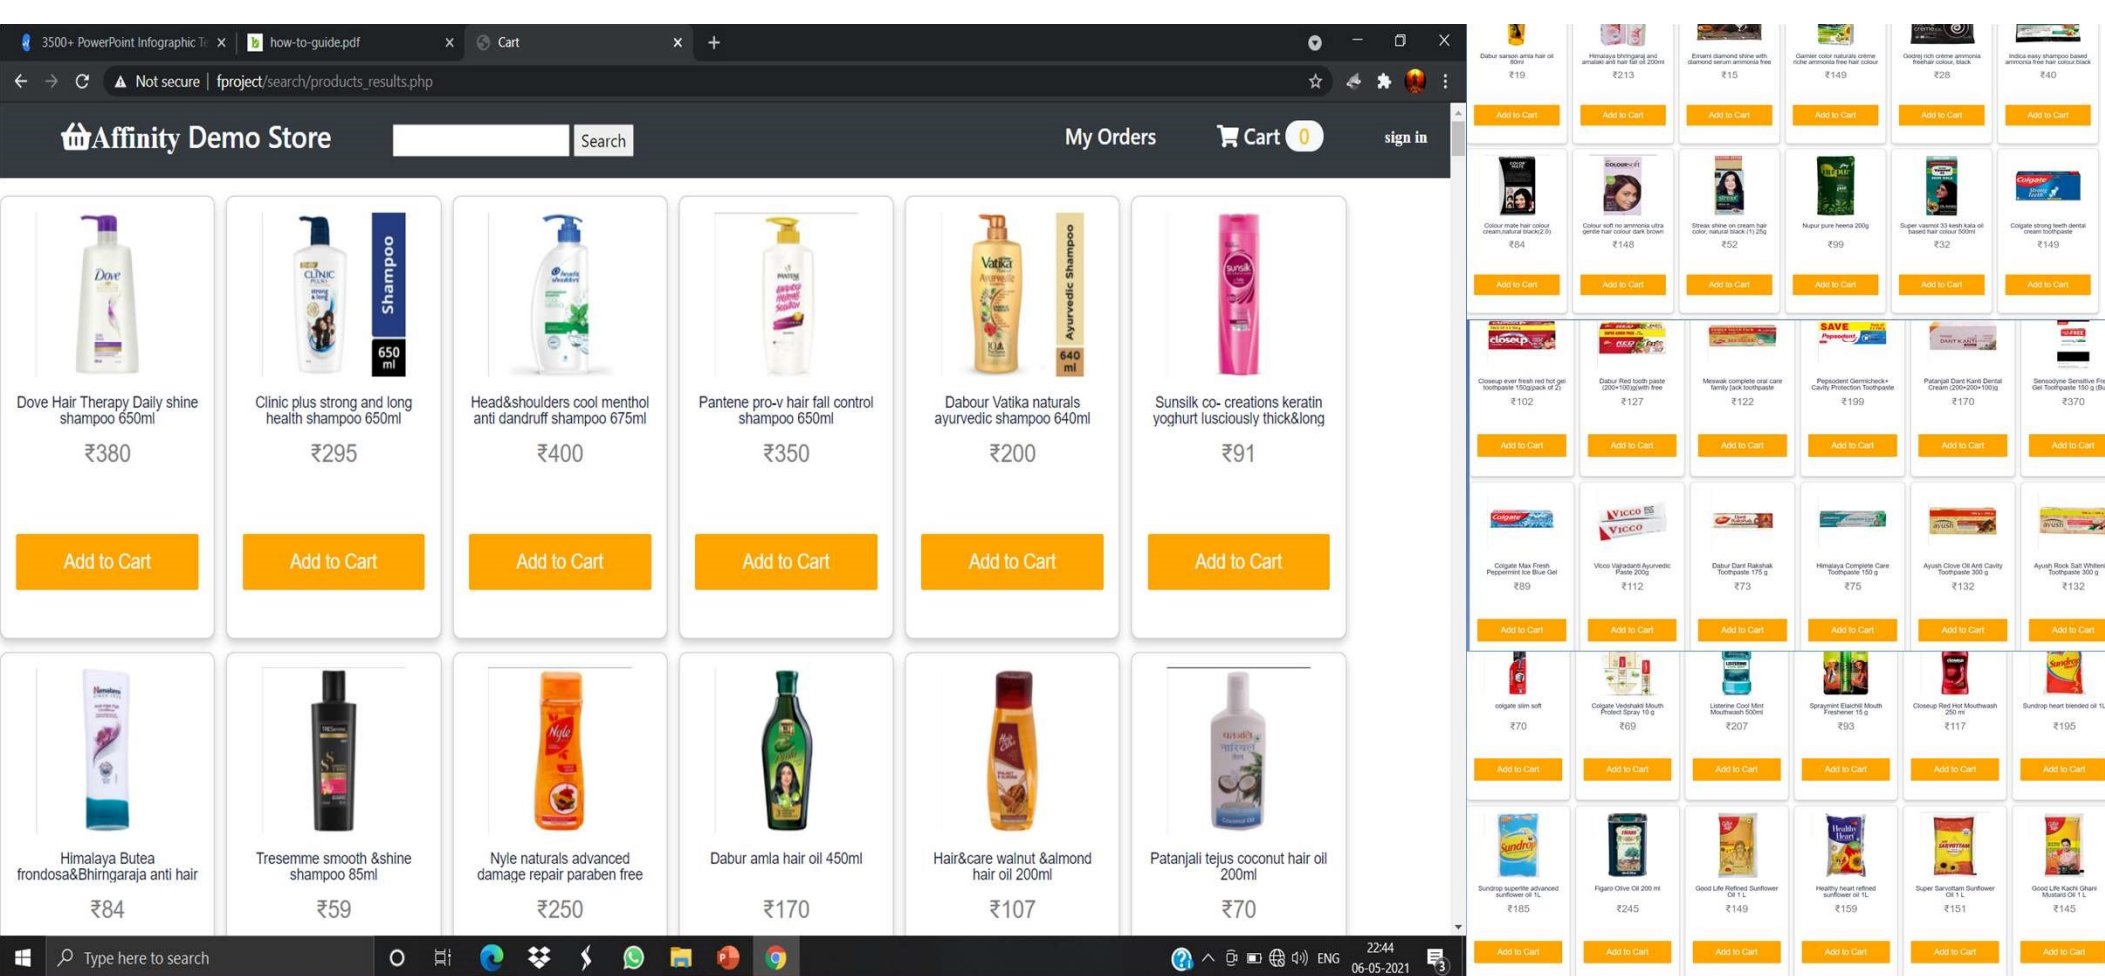

The User PoV

Demo Stores

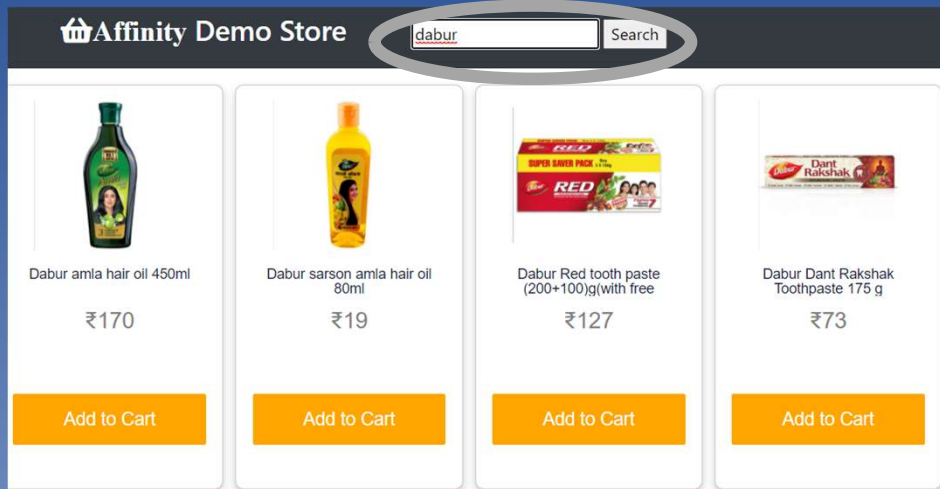

- The user can generally access the nearby store . But currently for understanding we kept a demo store which consists of products and its details. The user can visit the store for searching or understanding the details of products without logging into it.

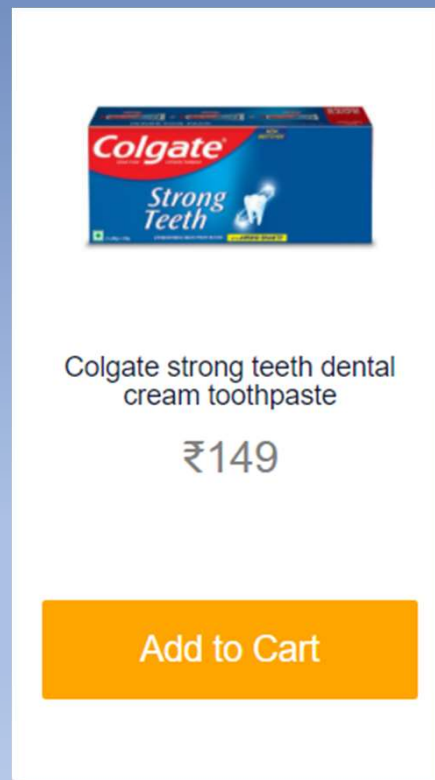

- By clicking on above demo store option, the user then get into the page where the product details and cart features are appeared which you can see in above picture.
- Before adding to the cart the user has to sign in where they can see at the right top.

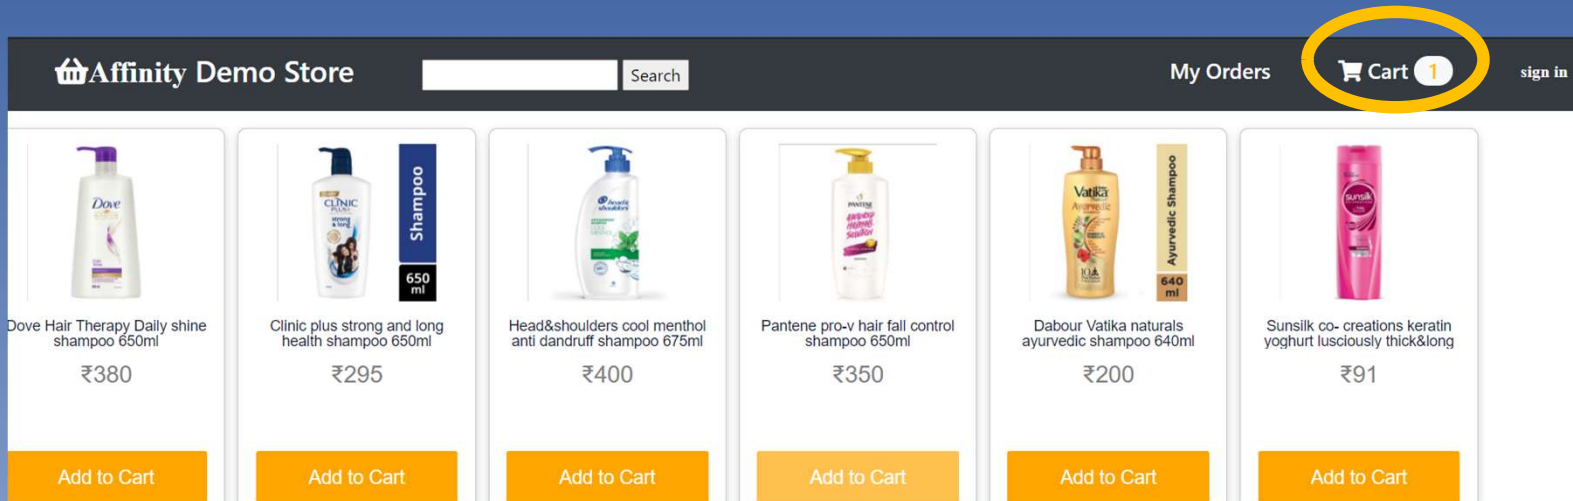

- A search engine is provided at the top of the previous page where the user can search for a specific product. As an example here there is list of products that are named by “dabur”.

- Each item in the page is given with a add to cart option where the user can add the product to their cart

- As the user presses on the add to cart button the product will added to the cart and that will be visible at the top.
- The user can check the cart list and edit it by going on to the cart menu.
